

AMENDMENTS TO THE SPECIFICATION

(1) Please replace the Abstract with the following:

IN THE ABSTRACT

An injection device for administering a fluid product including an operating mechanism pivotable in a radial direction relative to the device about a fulcrum arranged laterally on the device, wherein the operating mechanism includes a protrusion that cooperates with a dispensing mechanism for dispensing the product via a surface oblique with the respect to the longitudinal axis of the injection device. The dispensing mechanism may be moved in an axial direction relative to the device by pivoting the operating mechanism. In some embodiments, the device may further include a movable releasing element for releasing a dose, wherein the releasing element projects through an opening, the dimensions of which limit movement of the releasing element in accordance with a predetermined dose amount. In some embodiments, the device may also include a shiftable sleeve arranged such that, in one position, the sleeve surrounds an injection needle associated with the device.

(2) Please amend the specification as follows:

Page 7, line 17-19: “In one embodiment, to release a predetermined dosage the lever is moved from a first stopper on one side of the opening to a second stopper on the other side of the opening.”

In addition, replacement pages for pages 13-16 of the specification have been provided in the Appendix attached hereto. The revisions on these pages are provided to correct the numbering errors identified by the Examiner and several other non-substantive errors. No new matter has been added.
